

2019 Water System Maintenance Program

The Suffolk County Water Authority will be conducting its Water System Maintenance Program in communities throughout the SCWA service territory beginning in March and continuing throughout the fall. Under the program, fire hydrants will be opened in order to remove any sediments that may have collected within our pipes to ensure that you always have the highest quality water. The program also allows us to check to make sure that hydrants function properly and that a sufficient water supply is available for fire protection.

What to Expect During this Program

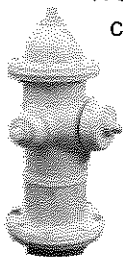

During this maintenance program, customers may briefly experience lower water pressure, discolored water and/or water collecting in the street on which maintenance is being performed. These conditions should be temporary. Rusty or discolored water is a result of this flushing process. It is primarily natural iron and other solid matter stirred up into the water. It is not harmful to your health.

What to do if your Laundry becomes Stained by Discolored Water

If you experience discolored water, please know that it should last only for the day on which work is conducted in your neighborhood. If you do experience discolored water and your laundry is stained as a result, try rewashing the clothes using more detergent and add rust remover. It is not advisable to attempt to bleach clothes or put them in the dryer.

When the Maintenance Program will be in your Neighborhood

Weather permitting; the maintenance program will be conducted according to the schedule. However, to see daily updates on the schedule, go to www.scwa.com and click on "Maintenance Announcements" on the home page. You can also like us at [facebook.com/scwawater](https://www.facebook.com/scwawater) to receive updates. And please feel free to call our Customer Service office at (631) 698-9500 with any additional questions or concerns.
